SUMMARY

Backend-heavy full-stack engineer (Java/Spring Boot, React/TypeScript, AWS) scaling services that support ~27M requests/day and ~20M monthly active members. Delivered a 10x P99 latency reduction and production AI automations (OpenAI + Cursor agents) that removed dozens of stale flags and 10+ eng-hrs/month of toil.

EDUCATION

•**Indian Institute of Technology Ropar**
Bachelor of Technology

2017 – 2021
Rupnagar, Punjab

PROFESSIONAL EXPERIENCE

•**ABC Fitness Solutions India**
Software Development Engineer II

Mar 2025 – Present
Hyderabad, India

Memberships & Operations

- Cut **P99 latency 10x** (1,200 ms to 120 ms) and **P50 20%** by owning **REST API design** for query/filter semantics and rewriting hot-path **SQL** around index-friendly access patterns.
- Published an organization-wide **Oracle MCP** for AI-assisted diagnostics across **4 environments** (dev, beta, staging, prod), enforcing mandatory VPD scoping, three-layer read-only controls, 100-row caps, and 15-second connection timeouts.
- Accelerated AI-assisted ticket investigation by building and hosting an organization-wide **BackTrak MCP** for audit trails and point-in-time snapshots across any DataTrak table, resolving VPD-scoped rows through primary and composite keys.
- Standardized retry and backoff across **12 microservices** by centralizing **Spring Retry** policy in **Spring Cloud Config** with runtime tuning and CloudWatch/OpenSearch observability.
- Reduced code-review rework by ~25% by conducting **code reviews** for backend/full-stack changes and enforcing test coverage, performance, and coding standards before merge.
- Reduced **duplicate member creation** by ~90% by adding request validation, backend dedupe safeguards, and reconciliation logging.
- Cut erroneous **refund prompts** to ~0 and related support tickets by ~30% by triggering prompts only after confirmed cancellation.
- Eliminated dozens of stale **LaunchDarkly** flags and saved **10+ eng-hrs/month** by building an agentic AI tool that opens Jira-linked, test-verified cleanup pull requests through Git/Jira/CI tool calls.

Reporting Automation Platform (self-initiated, one-week build)

- Saved ~10 hrs/week across **7 leaders and 2 teams** by shipping an OpenAI-powered full-stack **LLM application** that collects metrics and generates Excel/PPT/email leadership updates.
- Raised on-time responses from **60% to 95%** and cut turnaround from ~2 days to under 2 hours by combining prompt engineering, structured outputs, sentiment analysis, and Quartz reminders.

•**Beehyv Software Solutions**
Software Development Engineer (FullStack)

Aug 2022 – Mar 2025
Hyderabad, India

IRIS

- Secured all customer-facing **REST APIs** for **1,000+ banking users** at the Reserve Bank of South Africa by building JWT login and email-verified password reset flows.
- Sustained **99.9% authentication availability** through provider outages by designing a fault-tolerant OTP service with Plivo/Exotel circuit-breaker failover and response caching.
- Remediated **10+ injection findings**, including **3 high-severity** issues, by implementing a global XSS sanitization filter across API inputs.
- Standardized scheduled-job execution across **6 internal teams** by designing and deploying a fault-tolerant scheduler microservice on **AWS ECS**.
- Reduced duplicate invoice writes to ~0 by designing concurrent **REST API contracts** with **idempotency keys**, row-level locks, and Oracle Flexcube data-consistency controls.
- Raised unit/integration coverage to **85%+** by building **JUnit/Mockito** suites across critical service paths.

Beesheets

- Cut payroll-report generation time by **95%** by optimizing SQL queries and adding targeted indexes.
- Delivered ~10K notifications/day by building an event-driven **Kafka** / **Amazon MSK** pub/sub architecture that decoupled producers from consumers.
- Cut access-provisioning time by ~80% by integrating **Keycloak** RBAC and automating user provisioning through the Keycloak Admin REST API.
- Cut per-hire IT setup from ~20 minutes to seconds for **200+ employees** by auto-provisioning Microsoft 365 accounts through the **MS Graph API**.
- Cut deployment time by ~70% by containerizing Beesheets with **Docker** and deploying images through **AWS ECR/ECS**.
- Eliminated paid-tier grid licensing cost (**\$0**) by building custom AgGrid column filters with React, Redux, TypeScript, and Spring Boot.
- Reduced duplicate UI work across **8+ screens** by engineering reusable React and TypeScript filter and date-range components validated with Jest and React Testing Library.
- Graduated **3 new engineers** into productive full-stack developers within **6 months** by running daily standups, reviewing code/designs, and conducting assessments.

Career Break

Full-time preparation for India's UPSC Civil Services Examination.

2021 – 2022

PROJECTS

•Google DSA Interview Prep

Jun 2026 – Present

github.com/yashcodes161198/GoogleDSA

- Built a Next.js 16 + TypeScript platform tracking ~770 **Google LeetCode problems** with Supabase/PostgreSQL, RLS, progress analytics, and topic-gap coverage.
- Shipped **2-hour mock interviews** with 5 weighted problems and implemented SM-2 spaced repetition plus Supabase Auth; deployed on Vercel.

•Http-Server-From-Scratch

Jun 2024 – Jul 2024

github.com/yashcodes161198/simple-java-http-server

- Built custom HTTP parsing/validation with strict format checks using a test-first (TDD) workflow.
- Handled concurrent client requests through multithreading.

•Log Monitoring Application

Mar 2023 – Apr 2023

github.com/yashcodes161198/LogMonitor

- Streamed append-only log updates to multiple subscribers through persistent WebSockets using Spring Boot and React.
- Handled **100 GB log files** without loading them into memory by combining Java WatchService with an optimized tail reader.

SKILLS

Frameworks: Spring Boot, Spring Security, React.js, Next.js

AI / LLM: Model Context Protocol (MCP), OpenAI API, LLM applications, AI agents (tool/function calling), prompt engineering

Languages: Java, TypeScript, JavaScript, Python, Go, C/C++

Cloud (AWS): ECS, ECR, S3, RDS, MSK, OpenSearch Service, CloudWatch, Lambda

Databases: SQL — MySQL, OracleDB, PostgreSQL; NoSQL — MongoDB, Apache Cassandra, Redis (caching)

Tools & Platforms: Kafka, Zookeeper, Docker, Kubernetes, OpenSearch, LaunchDarkly, Linux, Git, GitHub

Testing: JUnit, Mockito, Jest, React Testing Library

Dev & Infra: CI/CD, REST APIs, Microservices, Grafana/AppDynamics, Tracing, Spring Cloud Config

CS Fundamentals: Data Structures & Algorithms, System Design, Distributed Systems, Design Patterns
